Your Task

- Write an assembly language to perform all the shift operations (LSR, ASR, LSL) on a 32-bit variable.
- Write an assembly language to find the largest and smallest numbers among n different numbers.
- Write an assembly language program to perform the sum and average of n numbers.
- Write an ARM assembly language program to count the number of 1 bits (also known as the population count) in a 32-bit unsigned integer.

Submission Guideline

- 1 Your Assembly code with proper comments. (*.s file) A
- 2 document (*.tex file) that contains:
- 3 Detail explanation of the code
 - Screenshot that shows the state of the system after the code has been loaded.
 - Screenshot that shows the situation after the code has been executed.
 - Submit as a .zip file. Example: your classroll lab#.zip (12 lab2.zip) _
